CLAIMS

4	Having thus described the aforementioned invention, we claim:
1	A housing for securing an arc plate, said arc plate including a first
2	longitudinal edge, an opposed second longitudinal edge, a notched first end, and a
3	second end opposed to said notched first end, said housing comprising:
4	a first support member;
5	a second support member secured in spaced relation to said first support
6	member;
7	a first securing ledge protruding from said first support member and toward
8	said second support member;
9	a first opposing ledge protruding from said first support member and toward
10	said second support member, said first securing ledge and said first opposing ledge
11	defining a first slot adapted to receive said first longitudinal edge of said arc plate;
12	a second securing ledge protruding from said second support member and
13	toward said first support member;
14	a second opposing ledge protruding from said second support member and
15	toward said first support member, said second securing ledge and said second
16	opposing ledge defining a second slot adapted to receive said second longitudinal
17	edge of said arc plate;
18	a stop member extending into one of said first slot and said second slot, said
19	stop member engaging said first end of said arc plate; and
20	a locking member extending into said first slot to engage said second end of
21	said arc plate.
1	2. The housing of Claim 1 wherein said stop member is resilient and

deformable.

17

18

1	3. The hou	sing of Claim 1 wherein said locking member includes a	
2	resilient member and	a tab, said resilient member having a first end fixedly	
3	attached to said first	securing ledge and having a second end connected to said	
4	tab, said tab having a	n inside face for securing said arc plate in said housing.	
1	4. The hou	sing of Claim 1 wherein said first support member, said	
2	second support member, said first securing ledge, said second securing ledge, said		
3	stop member, and said locking member form an integral molded assembly.		
1	5. A housi	ng for securing an arc plate, said arc plate including a first	
2		opposed second longitudinal edge, a notched first end, and a	
3		o said notched first end, said housing comprising:	
4	a first support	member;	
5	a second supp	ort member secured in spaced relation to said first support	
6	member;	1	
7	a first securing	ledge protruding from said first support member and toward	
8	said second support	nember;	
9	a first opposing	g ledge protruding from said first support member and toward	
		nember, said first securing ledge and said first opposing ledge	
10			
11	_	apted to receive said first said longitudinal edge of said arc	
12	plate;		
13	a second secur	ing ledge protruding from said second support member and	
14	toward said first supp	port member;	
15	•	sing ledge protruding from said second support member and	
16	toward said first supp	port member, said second securing ledge and said second	

opposing ledge defining a second slot adapted to receive said second longitudinal

edge of said arc plate;

nding into one of said first slot and said second slot, said	a stop member extend
first end of said arc plate, said stop member being	stop member engaging said f
nd	resilient and deformable; and
tending into said first slot to engage said second end of	a locking member exte

a locking member extending into said first slot to engage said second end of said arc plate, said locking member having a resilient member and a tab, said resilient member having a first end fixedly attached to said first securing ledge and having a second end connected to said tab, said tab having an inside face in contact with said arc plate.

- 6. An apparatus for quenching an arc, said apparatus comprising:
- a first wall;
 - a second wall secured in spaced relation to said first wall;
- a first slot formed in said first wall and opening toward said second wall;
 - a second slot formed in said second wall and opening toward said first wall;
- a back stop member sequred in spaced relation to said first wall;
- a locking member secured in spaced relation to said first wall;
- an arc plate in slidable communication with said first slot and said second slot;
 - whereby said arc plate is secured by said first slot, said second slot, said back stop member, and said locking member.
- 7. The apparatus of Claim 6 wherein said back stop member is resilient and deformable, said back stop member being deformed and in contact with said arc plate, whereby said back stop member forces said arc plate against said locking member.

8

1	8. The apparatu	s of Claim 6 wherein said locking member includes a
2	resilient member and a tab	o, said resilient member having a first end fixedly
3	attached to said first wall a	and having a second end connected to said tab, said tab
4	having an inside face in co	ntact with said arc plate.
		ALC:
1	9. An apparatus	for quenching an arc, said apparatus comprising:
2	a first wall;	
3	a second wall secure	d in spaced relation to said first wall;
		•
4	a first slot formed in	said first wall and opening toward said second wall;
5	a second slot formed	in said second wall and opening toward said first wall;
_	u 5000114 5101 1011110	in said seesila war and opening toward said mot wan,
6	an arc plate in slida	ble communication with said first slot and said second
7	slot;	
8	a locking member se	cured in spaced relation to said first wall and including
9		ab, said resilient member having a first end fixedly
10		nd having a second end connected to said tab, said tab
11	having an inside face in co	_
	J	•
12		secured in spaced relation to said first wall, said back
13	_	t and deformable, said back stop member being
14		th said arc plate, whereby said back stop member
15	pushes said arc plate towa	ds said tab;
16	whereby said arc pla	ite is secured by said first slot, said second slot, said
17	back stop member, and sa	
1	10. The apparatu	s of Claim 9 wherein said first slot, said second slot,
2		d said locking member form an integral assembly.
-	such stop momber, at	T Jimig momor form an integral accomoly.

An apparatus for quenching an arc, said apparatus comprising:

11.

2	an arc stack housing having a first member secured in spaced relation to a
3	second member, said first member and said second member defining a slot having
4	a back end and an insertion end;
5	a back stop positioned at said back end;
6	a locking member positioned at said insertion end;
7	an arc plate insertable into said slot.
1	12. An apparatus for quenching an arc, said apparatus comprising:
2	an arc stack housing;
3	an arc plate; and
4	a means for securing said arc plate in said arc stack housing.
1	13. The apparatus of Claim 12 further comprising a means for preventing

said arc plate from vibrating in said arc stack housing.
